DETAILED ACTION

Allowable Subject Matter

1. **Claims 1-20** are allowed.
2. The following is an examiner's statement of reasons for allowance: The present invention comprises a data transmission circuit having a first transmission mode and a second transmission mode transmitting data at a lower speed than the first transmission. The circuit includes a constant current driver, a buffer circuitry, a dummy buffer circuitry including switching elements and a selection circuit that selects between the buffer and dummy buffer depending on an impedance control signal. The closest prior art, Yahishita et al. (US 6,525,570) and Yashishita et al. (US 6,876,225) discloses an Input/output Interfacing Circuit, Input/output Interface, and Semiconductor Device Having Input/output Interfacing Circuit. However, Yahsishita fails to disclose a high-speed vs low speed mode of operation. Yahsishita also does not disclose both a buffer and a dummy buffer being selected based on an impedance control signal. The distinct features have been added to the independent claims 1, 7, 17 and 19, therefore, rendering them allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
